

Xtreme Duty Pro XDP[®] Series

The Xtreme Duty Pro XDP[®] pump is designed for use in process type applications including filter press, high pressure, extended deadheading, long runs of discharge pipe, and where air consumption is critical.

Available in 1-1/2", 2" and 3" port sizes, these pumps are built on the liquid platform of a standard NDP Series pump, but with a mechanically actuated air motor.

Air power is conserved by actuating the air valve using a mechanical linkage instead of relying on air pressure. Air power is reduced by 20% vs. a standard air-actuated valve providing more pressure to drive the diaphragm assembly.

Xtreme Duty Pro[®] XDP pumps are capable of running on air pressure equivalents as high as 125 PSI or as low as 5 PSI and provide the same liquid side performance as the NDP Series pumps.
